Full Veterinary Examination Report

Executed on:	24/04/2024
Name:	Hester K Z
Chip Number:	528224001130377
UELN Number:	
Origin:	High Big Andi K x ?
Sex:	F
Birthdate:	16/05/2019
Colour:	chestnut

Clinical Examination:

GENERAL

	good/normal	deviant
Build and Posture:	☒	☐
Feeling Condition:	☒	☐
Skin and Hair:	☒	☐
Mucous membranes:	☒	☐
Lymph Glands:	☒	☐
Eye left:	☒	☐
Eye right:	☒	☐
Mouth:	☒	☐
Circulatory Physiology		
Pulse rate, in condition of rest	☒	☐
Pulse rate, after labour:	☒	☐
Respiratory System		
Spontaneous Cough:	☒ not present	☐ present
Additional noises during labour:	☒ no	☐ yes
Good/normal deviant larynx:	☒	☐
Condition of incited cough:	☒	☐
Respiration in condition of rest:	☒	☐
Respiration after labour:	☒	☐
Type of respiration:	☒	☐
Digestive Physiology:	☒	☐
Urogenital System:	☒	☐
Nervous System:	☒	☐
Tale Tone:	☒	☐
Reflex:	☒	☐
Coordination:	☒	☐

Inspection and Palpation

	good/normal	deviant
Head:	☒	☐
Neck:	☒	☐
Withers:	☒	☐
Back:	☒	☐
Left front leg (LF):	☒	☐
Right front leg (FR)	☒	☐
Left hind leg (LH)	☒	☐
Right hind leg (RH)	☒	☐
Horn quality:	☒	☐

This report is only valid if provided with a signature and general terms and conditions.

Hoof percussion: ☒ ☐
 Hoof visitation: ☒ ☐
 Size and shape: ☐ equal ☒ LF > RF LF heel slightly higher
 Scarves present: ☒ no ☐ yes, mark:
 size scarve:

POSTURE

Walking on hard surface

	good/normal	deviant
Straight line	☒	☐
Small circle left:	☒	☐
Small circle right:	☒	☐

Trotting on hard surface

Straight line:	☒	☐
Small circle left:	☒	☐
Small circle right:	☒	☐

Trotting on soft surface

Small circle left:	☒	☐
Small circle right:	☒	☐

Cantering on soft surface

Small circle left:	☒	☐
Small circle right:	☒	☐

Walking backwards:	☒	☐
Remarks:	none	

Flexion Tests:

Tightening of lower leg

	Not sensitive	Remark
LF:	☒	☐
RF:	☒	☐
LH:	☒	☐
RH:	☒	☐

Trotting off after 1 minute bending

LF: negative
 RF: negative
 LH: negative
 RH: negative

Spavin Tests:

L: not sensitive	LH: not lame
R: not sensitive	RH: not lame
Inspection of patella:	☒ normal ☐ deviant
Fixation of patella L:	☒ not possible ☐ possible
Fixation of patella R:	☒ not possible ☐ possible

Radiografic Examination:

Navicular	L:	good	grade: 1-2
	R	good	grade: 1-2
Fetlock	fore L:	good	grade: 1
	fore R:	good	grade: 1-2
	hind L:	good	grade: 1
	hind R:	good	grade: 1
Sesamoïdes	fore L	good	grade: 1
	fore R:	good	grade: 1
	hind L:	good	grade: 1
	hind R:	good	grade: 1
Tarsus	L:	good	grade: 1
	R	good	grade: 1
Stifles	L:	good	grade: 1
	R:	good	grade: 1

Remark:
 LF PH I: non-reactive newbone palmar.

Conclusion Clinical Examination

Good
 Sufficient
 Moderate
 Bad

Remark :

Final Conclusion:

Clinical healthy horse on the day of the exam.

Kind regards,

☒

Terms and conditions

A prepurchase or sale examination gives only my personal assessment of the current medical condition of the horse. Linked is a type of risk assessment of medical problems that can happen regarding the use of the horse.

This examination has several limitations:

- Each exam is a snapshot. Any horse can at one moment seem very healthy, or at another limping, showing heart murmurs or respiratory distress. This difference may be due to coincidence, occurred after injury or illness, changes in housing, whether or even drug camouflage prior to the exam.
- If the customer wants it, there is the possibility to include a blood sampling to detect illegal substances.
- It deals no obligation towards any results. The horse is examined in function of a client and the purpose for which the horse will be used. This exam and the standards used for it, can therefore vary between clients and horses. This report is therefore only applicable to no one else than the person stated on the report.
- The client agrees with the extent of the investigation, and realizes that this is always a compromise between risk-limitation and price for the exam. If for example an additional endoscopy or additional X-rays are desirable, this can be asked in advance or during the exam.
- The standards used in the radiographic examination can be different from those used by colleagues or universities and can differ between what is common in different countries. There are only those findings indicated that I believe are important. Deviations that I believe have no interest are not mentioned. Example: fragments at the distal border of the navicular bone (with or without a recess in the navicular bone itself), ossification of the hoof cartilage, etc.
- Since this exam is no research addressing the capabilities of the horse as a riding or sporthorse... Neither is it a valuation of the horse.
- It cannot clearly demonstrate whether the horse might have had surgery or other treatments, such as repeated infiltration of the joints, colic surgery, ... Hence it is the sole responsibility of the purchaser to cover himself here.
- It is also the sole responsibility of the purchaser to cover himself in terms of stable vices such as: crib biting, wind sucking, weaving ...
- The buyer must be aware that some diseases are seasonal, so they may not be present at the time of the inspection. (for example summer itch, headshaking, ...) About this aspect he must cover himself as well.
- If the buyer wants to insure the horse, he will have to wait before buying it, until he has the approval of the insurance company. A test conducted by myself, is not automatically an approval for an insurance company. They may have different standards.
- This exam gives you no advice as a future stallion, because the standards used for this can be vary between the different studbooks.
- It is also the buyer's full responsibility to receive the full ownership papers included the "mutatie luik" of the horse.

This report is only valid if provided with a signature and general terms and conditions.
